### *Introduction*

*Concrete Plasticizer are chemical admixtures that can be added to concrete mixtures to improve workability. Unless the mix is "starved" of water, the strength of concrete is inversely proportional to the amount of water added or water-cement ratio. In order to produce stronger concrete, less water is added (without "starving" the mix), which makes the concrete mixture less workable and difficult to mix, necessitating the use of plasticizers, water reducers, superplasticizers or dispersants.*

*Plasticizers are also often used when pozzolanic ash is added to concrete to improve strength. This method of mix proportioning is especially popular when producing high-strength concrete and fiber-reinforced concrete.*

*Adding 1-2% plasticizer per unit weight of cement is usually sufficient. Adding an excessive amount of plasticizer will result in excessive segregation of concrete and is not advisable. Depending on the particular chemical used, use of too much plasticizer may result in a retarding effect.*

### *Features*

Mobile/Wechat:0086 13053363281,0086 17865273019

Mail:sales@zhuoxingchem.com,sales02@zhuoxingchem.com

**Shandong Zhuoxing Chemical Co., Ltd.**  
**Zibo Zhuoxing Enterprises Co., Ltd.**

*Concrete Plasticizer has Low chlorine and alkali, non-toxic, no influence on the ecological environment.*

*Concrete Plasticizer Can significantly reduce slump loss.*

*Concrete Plasticizer hardened concrete appearance is good, without water, large bubbles, off color*

*Concrete Plasticizer Can greatly improve the compactness of the product, freezing-thawing resisting sexual, carbonation resistance, elastic modulus and permeability resistance; Reduce the drying shrinkage and creep of concrete.*
