Powder Superplasticizer water reducer

Characters(Powder Superplasticizer water reducer)

1.Solid ,Powder. No leaking, suitable for transport and save freight, especially for long distance transport.

2.Bag, save cost of package. Cost of bag is much lower than drum, decreasing the package cost a lot.

Main performance

(1) good adaptability of cement. It has good dispersibility to various Portland cement, common Portland cement, slag Portland cement and various admixtures.

(2) concrete water reduction rate can be up to more than 36%, solid content 40%;

(3) with good slump protection performance, it can achieve no loss of concrete slump of 2h;

(4) Powder Superplasticizer water reducer has good early-strength performance, which can accelerate the hardening speed of concrete, realize steam-free curing, accelerate the turnover of precast members'

formwork, and improve work efficiency;

(5) low alkali content, no chloride ions, non-corrosive to steel reinforcement, can significantly improve the durability of concrete;

(6)Powder Superplasticizer water reducer is non-toxic, odorless and environmentally friendly.

Usage method

1. Powder Superplasticizer water reducer used for grouting material and repairing mortar can improve the fluidity of slurry, facilitate construction and enhance its strength.

2. Powder Superplasticizer water reducer is suitable for high performance concrete, high strength concrete and large flow concrete. When used in concrete above C50, raw materials should be selected according to relevant technical specifications, appropriate mixing technology should be determined, and a certain amount of test data should be obtained. In order to make the flowability of concrete meet the construction requirements, the strong bottom of concrete should have a certain coefficient of affluence.

profile

Zibo zhuoxing Enterprises co., ltd has more than 10 years experience with products, it's trustworthy.we have our own production

line,professional technical team and best quality,you can also visit our company any time,we have several types of polycarboxylate monomer like HPEG,TPEG, and we also have polycarboxylate superplasticizer powder (water reducing type),the effect is excellent,
